

DIGITAL TV CONFORMANCE TEST SERVICES

DIGITAL TV CONFORMANCE TEST SERVICES

Labwise provides conformance test services for STB, IDTV and component manufacturers

Labwise is an independent and professional test laboratory for performing all sorts of conformance and verification tests according to global, local and regional digital TV requirements and specifications.

Cable Ready

Labwise is an authorized test laboratory for performing verification tests according to the Cable Ready and Cable Ready HD specifications used in Finland.

As an official custodian of the Cable Ready license, Labwise offers turn key licensing services for the TV device manufacturers who wish to apply for the corresponding Cable Ready license.

NorDig

NorDig is the operator-defined common digital TV device requirement set and a full test specification forming the minimum requirements for the DTV devices in the Northern European market.

NorDig conformance is also a pre-requisite for many of the Northern European pay-TV operators for accepting new DTV devices for their own acceptance tests.

Labwise performs full NorDig conformance tests for DTV device manufacturers who need external expert opinion about the NorDig conformance of their devices.

European TV standards and specifications

Labwise performs conformance tests against various European digital TV standards and specifications for manufacturers who need an expert opinion about their device capability, before submitting the device for the official local conformance tests.

Combining various Central and Northern European tests at Labwise into one larger test project is a cost effective and fast way of finding out the device conformance to multiple standards and specifications in one go.

EICTA E-Book

E-Book is the Central European requirement specification for terrestrial (DVB-T) receivers. E-Book has been defined by the device manufacturers who are members of EICTA.

DTG D-Book

D-Book is the requirement specification for the terrestrial (DVB-T and DVB-T2) receivers in the UK market. Labwise can perform full D-Book pre-tests (excluding MHEG-5 software) to reveal the device conformance level before the manufacturer submits the device for official D-Book acceptance tests at DTG.

DGTVi D-Book

DGTVi defines the requirements for the Italian terrestrial (DVB-T) receivers. Labwise performs DGTVi pre-tests for manufacturers who wish to reveal their device conformance before submitting the device to the official DGTVi tests.

HD Forum

HD Forum defines the requirements for the terrestrial (DVB-T) requirements for the HDTV devices in France

Labwise, your single point of contact for pay-TV operator acceptance tests in Scandinavia

Labwise offers a single point of contact for manufacturers who seek to introduce their device for multiple pay-TV operators in Scandinavia.

On behalf of the manufacturer, Labwise will contact the various pay-TV operators and handle all the communication and interfacing with the operators, including, for example:

- Reservation of the official test slots with the operators.
- Handling of the test sample shipments and software updates.
- Performing of the pre-tests in order to reveal any non-conformity before the official acceptance tests.
- Handling of all the paperwork, test contracts, licensing and billing with the operators on behalf of the manufacturer.

For more information about the **Conformance Test Services** and for reserving test slots, contact us by email or by phone:
